

Notes

- Streams within the primary corporate limits as of May 31, 2001 have been identified on this map. On an annual basis, the City of Greensboro will provide documentation to the maximum extent practicable of streams in newly annexed watershed areas to the North Carolina Division of Water Quality (DWQ) Winston-Salem Regional Office for review. Upon DWQ approval, these streams will be incorporated into the stream map.
- The DWQ shall re-evaluate the map in its entirety no sooner than every ten (10) years from the date of the approval by the North Carolina Environmental Management Commission (EMC) unless such a review is requested sooner in writing by the City of Greensboro.
- If questions are raised by the public or landowners regarding the accuracy of any stream location shown on the map, the City of Greensboro staff may make a written request to DWQ Winston-Salem Regional Office for a site visit. Refinements to this map will be based on these site visits.
- This map will be considered by DWQ to be definitive for perennial stream origins for the water supply rules with the above-mentioned conditions. For the Randleman Buffer Rules (15A NCAC 2B .0250), these maps shall be used as guidance only.

Note: This map applies to locally enforced regulations only. For the US Army Corps of Engineers (USACE) 404 Wetland Permit and DWQ 401 Water Quality Certification process, these maps are only advisory. A site visit by the USACE is required for this permitting process.
